DETAILED ACTION

Response to Arguments

1. Applicant's arguments, see remarks/arguments, filed November 7, 2005, with respect to the rejection(s) of claim(s) 1-9 under 35 U.S.C. 102 (b) and 35 U.S.C. 103(a) have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of Fuller U.S. Patent 5,877,041.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Fuller U.S. Patent 5,877,041.

4. Fuller discloses a semiconductor process as claimed. See FIGS. 1-2G, where Fuller teaches the following limitations.

Fuller discloses a method of forming a portion of an integrated circuit comprising:

providing a silicon carbide base 12;
epitaxially growing a dielectric film 14 (see column 2, lines 38-46) on the silicon carbide base; and
forming a CMOS device (see column 3, lines 3-30 in which Fuller teaches forming FETs of both polarities) on the silicon carbide base and epitaxially grown dielectric film, wherein the CMOS device includes a channel region (i.e., between source/drain 30) and a gate dielectric, the channel region is formed in the silicon carbide base and the gate dielectric is formed by the epitaxially grown dielectric film.

Objections

5. Claims 2-7 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Allowable Subject Matter

6. Claim 8 allowed.

7. The following is an examiner's statement of reasons for allowance: the prior art does not anticipate nor render obviousness as to depositing an additional crystalline silicon carbide film prior to forming the epitaxial gate dielectric.

8. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
